PROFESSIONLA SUMMARY

Systems and Full Stack Engineer with experience building high-performance software using Rust, Go, Svelte and Jetpack Compose. Passionate about Linux, operating system internals and performance focused system design. Skilled in developing efficient backend, frontend and system level applications with a long-term goal of contributing to the Linux desktop ecosystem and core open-source infrastructure.

EDUCATION

G. PULLA REDDY ENGINEERING COLLEGE

Bachelor of Technology – Computer Science Engineering (Data Science), **CGPA: 7.23/10.00***

Kurnool, India

2023 – 2027

Kendriya Vidyalaya

Intermediate – Mathematics, Physics and Chemistry, **Percentage: 86.6%**

Kurnool, India

2021-2023

TECHNICAL SKILLS

Programming Languages : Rust, Go, JavaScript, TypeScript, Kotlin, C++, Java, Python, Bash

Frameworks & Libraries : Svelte / SvelteKit, Go Fiber, Express.js, Jetpack Compose, React.js, Node.js

Systems, Databases & Tools : Fedora Linux (Daily Driver), Wayland, LayerShell Protocol, Niri Window Manager, PostgreSQL, Git, Bash/Shell Scripting, Neovim

INTERNSHIP EXPERIENCE

Frontend Developer Intern — Mittal Alliance Industries Private Limited

11/2024 – 02/2025

- Built frontend interfaces using React.js as part of a collaborative development team.
- Collaborated with teammates on debugging, code reviews, and UI decisions shaped by real user behaviour.
- Strengthened React.js skills alongside communication and a production-oriented development mindset.

KEY PROJECTS

Wallstreet — Real-Time Stock Market Simulator | [Repo - Wallstreet](#)

Go (Fiber) • PostgreSQL • Svelte

- Designed and deployed a full-stack stock market simulation platform for a live interactive trading event.
- Built a high-throughput Go backend handling real-time trade transactions, user portfolios, and ledger tracking with PostgreSQL.
- Engineered a reactive Svelte dashboard with fine-grained signal-based updates for smooth, real-time stock price updates and order execution.

Wayland App Drawer (app-drawer-rs) | [Repo - App Drawer](#)

Rust • LayerShell Protocol • Wayland

- Lightweight application launcher built for Wayland compositors with zero-cost abstractions and minimal RAM footprint.
- Implemented using Rust and the LayerShell protocol for seamless desktop overlay integration in tiled environments like Niri.
- Optimized for fast startup execution and low resource consumption on Linux systems.

CIE Website | [CIE - Website](#)

Svelte • Responsive Design

- Web platform built for the Centre for Innovation & Entrepreneurship with reactive Svelte components.
- Implemented custom styling and smooth layout interactions for an engaging user experience.

DevKagitam — Native Android Plugin & Host App | [Repo - Dev Kagitam](#)

Kotlin • Jetpack Compose • Android SDK

- Native Android application built around extensible modular components for a plugin-based architecture.
- Fully developed in Kotlin using Jetpack Compose for state-driven, declarative UI execution.

EXTRACURRICULAR ACTIVITIES

Stock Market Simulation Event Host

Organized and managed a live trading event powered by the self-built Wallstreet platform. Managed live database state, server loads, and participant interactions under real-time conditions.

Daily Linux Workflows

Deep familiarity with Linux environments, command-line tooling, shell scripting, Wayland display protocols, and custom window manager logic. Daily driver on Linux with hands-on experience in system-level customization and optimization.

ACHIEVEMENTS

Best CSP of the Year GPREC | [Apvm Website](#)

Built and deployed a website for Annapurnamma (Aavasam) Vidyarthi Vasati Gruham using React.js and TailwindCSS, helping the organization reach donors, now live and in active use.
